

## Guidance Notes for Repair to a Meter Box

A GRP patch may be used to repair minor 'puncture' damage to the inner skin of a recessed meter box. Phoenix Natural Gas Limited (PNGL) recommends that any repairs must be carried out by a Gas Safe Registered Installer. PNGL does not undertake these repairs and will not accept liability for any equipment installed or quality of work performed.

### Advantages of a GRP patch are:

Example shown is manufactured by Unibond. GRP patches are not generally available from hardware stores and usually have to be obtained from specialist suppliers.

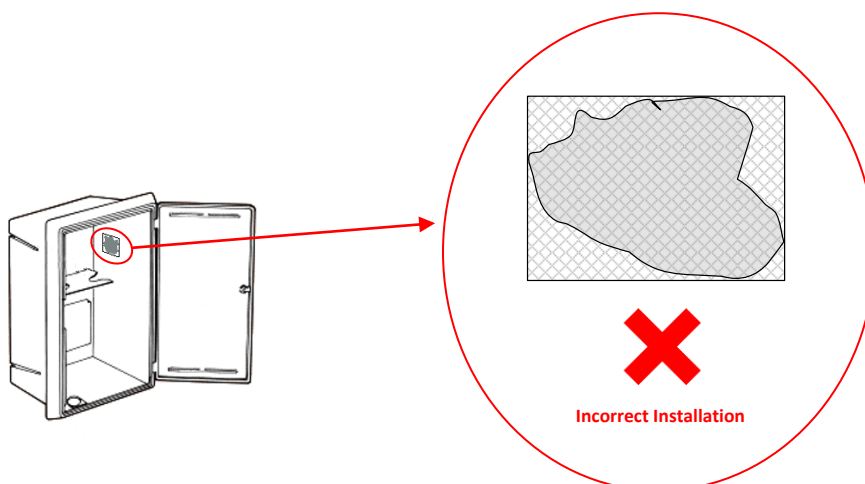

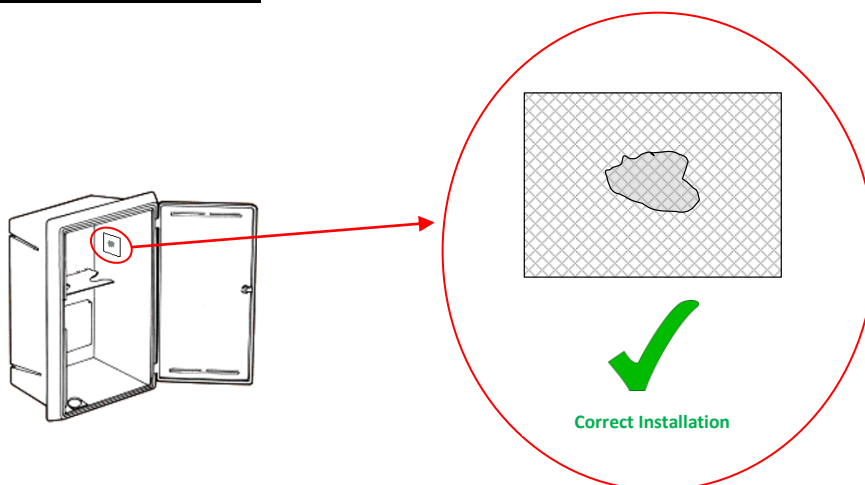

Easy-to-use, super strong self-adhesive patch designed to provide permanent repairs. They can be cut and moulded to virtually any shape, are flexible, do not shrink or expand on curing.

They set solid in daylight (10 minutes in strong sunlight), are weatherproof, heat and cold resistant (-25°C to 180°C) and resistant to shock and impact. They can be drilled, sanded or painted.

Ideal for bonding, repairing and fixing.
